

# Battery Validation Programme Delivery

We provide a complete battery pack validation delivery service for both small and large-scale hybrid and pure electric vehicle battery systems.

By utilising our advanced facilities and experience in test solution provision, programme management and engineering, we're able to deliver a total battery validation service to vehicle manufactures and Tier 1 suppliers.

Our experts can help you to consolidate, organise and manage your battery pack testing to add efficiency and reduce complexity on your verification and validation programmes while maintaining the standard of delivery.

# Battery Validation Programme Delivery

## Benefits of Our Service

We can take away the pain and difficulties of managing multiple specialist test and service providers and the logistics headaches involved with battery validation programmes.

### Complete validation programme management

- Single contract making it easier to manage one supplier – HORIBA MIRA
- Single point of contact to co-ordinate activities on behalf of your engineering team
- Existing battery test partners and suppliers offering a full range of battery validation facilities and capabilities

### Schedule management and product test optimisation

- Customer resource freed up to concentrate on core business activity
- Our test solution expertise can help ensure test sequences are optimised to minimise the number of prototype packs produced for testing
- Manage and report the progress of the validation plan

### Design Verification Plan consultancy

- Provision of specialist battery development and validation knowledge to help your development team
- Our test solution service can help optimise Design Verification Plans for efficient use of resources

### Specialist logistics and transport management

- Ensures legal, safe and confidential transport of live packs across the world
- Supply of validated UN38.3 battery transport cases for safe reliable transport packaging
- Safe storage management away from your site so you remain focused on core activities

### Quality, health, safety and environmental risk management

- Risks transferred to our specialists equipped to deal with them, so you don't have to
- Unique external abuse / misuse test site available to conduct extreme testing for product safety

### Confidential and safe post-test disposal management

- UK based teardown service offering to aid environmental disposal
- Traceable recycling compliant with environmental and safety regulations as befits a responsible OEM
